

CLADDING

Opt for the natural texture and subtle tan and ivory colours of Travertine, the intricate colour patterns and unique sparkle of Quartzite and Lavastone or the rich, soft textures of Sandstone in a wide range of colours including earthy browns, rusts, ivory and creamy shades.

Natural Stone cladding is cut and supplied in modular dimensions to assist easy and predictable installation, yet preserve the desired natural effect. Whatever effect you desire – be it the impact of an entire feature wall, the warmth of a fireplace surround or the natural charm and serenity of a water feature, our cladding options will provide the perfect materials to achieve your vision.

CLADDING

SIZES

We have a wide variety of sizes, formats and finishes available. Please speak to one of our sales consultants for more details.

RECOMMENDED APPLICATIONS

This product is suited for both interior and exterior walls.

As this is a natural product, one can expect slight colour variations between batches. Please arrange a product preview, either by photograph, or at one of our distribution centres in order to view the current stock.

LAYING RECOMMENDATION

- Space between pieces to be as small as possible
 - The use of Grey tile adhesive and bonding liquid for best adhesion
 - Grouting between pieces is unnecessary
 - No acid is to be used in the removing of grout/adhesive residue
 - Existing expansion joints are to be respected and not tiled over
 - Use expansion joints as prescribed by architect or specialized tiler
 - Tiles should be laid on a level and even screed which should have been cured for about one week before tiling
 - Most of our claddings are supplied in a set pattern. Please ensure that your tiler is supplied with the pattern before commencing tiling and that the correct pattern is followed.
 - Naturally each piece is unique in veining and tonality therefore the onus rest with the installer to ensure blending is done correctly before laying the tiles to achieve your desired effect.
-

PRODUCT CARE AND MAINTENANCE

All natural stone tiles should be sealed to prevent staining. The laid tiles should be washed with Stone Shield Deep Clean which is a stone detergent. The tiler must ensure that no grout or adhesive is allowed to dry on the tile surface. After washing and rinsing the stone must be left to dry completely. As an anti-stain treatment we recommend the use of Stone Shield Marble, Granite and Travertine sealer or Sandstone sealer as applicable. The product must be applied by professionals or under the strict instruction as indicated by the manufacturer. Sealers may cause enhancement of the natural colours of the stone depending on the stone type and the sealer used. Please speak to a consultant should you wish to have a demonstration of the finished product.

For everyday maintenance we recommend Stone Shield Daily Clean or a neutral Ph detergent. Do not use acid or alkaline detergents as repeated application will damage the sealer leaving the stone unprotected.

Remember to ask us about your warranty options.

The colours shown on this spec sheet are as exact as photographic and printing processes as well as screen resolution allow. We recommend that all colours are chosen from actual product samples available on request.
